

The frail care unit at Oostvallei is sub contracted to a outside entity specialising in this service. It caters for frail elderly patients and provision is made for elderly persons who are still independent, but who want to be close to speedy nursing assistance.

The frail care unit which is located within the village plays a major role in the decision making process to buy a unit in a Retirement Village. It has eight different rooms which can accomodate 12 beds. A big advantage is that this unit is centrally located within the village and is easily accessible for all residents. Another advantage is that should a patient from the village be convalescing there, it is safe and convenient for their spouse or other residents to visit at any time, should they so please.

the Ontario Health Services and the Ministry of Health and Long-Term Care. The Ontario Health Services and the Ministry of Health and Long-Term Care are responsible for the regulation and oversight of the health care system in Ontario.
